

## HANDSAW BLADES

### WAVE

The DIAQUIP WAVE Blade is a professional small diameter diamond blade, for cutting heavily reinforced concrete and general building materials with Hand Saws and low power Floor Saws.

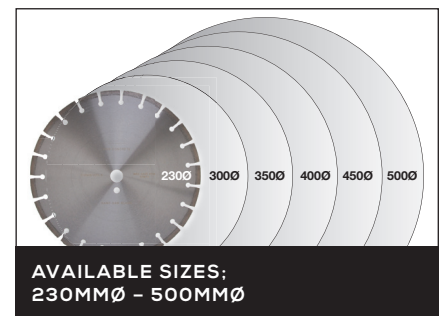

It is designed for free cutting but it is different to its competitors in that instead of the bond being softer the WAVE uses design technology to enhance performance and still provide long life.

Available in 6 sizes between 230 and 500mmØ and includes a Pre-Cut option

## SPECIFICATION DETAILS

- **More Cutting Edges** promotes faster cutting in a variety of materials and particularly for free cutting in steel
- **Less Friction** also promotes faster cutting as there is less drag on the segment
- **Better Water Coverage** due to the segment design clears slurry out faster and allows more water around the point of cut
- **Advanced Segment composition** meaning larger diamonds that increase speed of cut especially in steel and promotes longer life due to its high quality bond system

### TECHNICAL SPECIFICATION

Product Description	Professional Premium Diamond Handsaw Blade
Application	Fast Cutting with Long Life for free cutting in Reinforced Concrete and General Building Materials
Bore Size	25.4mmØ
Wet/Dry	Can be used for both applications
Diameter Range	230mmØ - 500mmØ
